Scoop Coater

Our popular Pro-Angle™ series scoop coater just got better with the introduction of the new Pro-Angle™ 2 Scoop Coater. Featuring both thick and thin sides for the desired coverage with any emulsion, experienced and apprentice screen printers alike now have an additional tool that saves them both time and money. Especially useful when coating large or multiple frames, the new deeper trough holds twice the emulsion of traditional scoop coaters, reducing the number of refills between passes.

Balanced and calibrated to lay down a uniform coating every time, the Pro-Angle 2 is made from top-quality extruded aluminum. The all-metal

ADVANTAGES

- Deeper trough—holds more, requires less refilling, needs fewer passes
- Dual edge—thick and thin coating sides give greater application options
- Anti-tip design—offers improved handling, creates less mess, saves emulsion
- Permanent end caps—won't leak or break, are easier to clean, don't fall off
- All-aluminum construction—hard, anodized gold finish for added durability
- Optimum angle—calibrated for uniform coverage and smooth coating
- Light/dust cover—protects edge from nicks, keeps light and debris out

construction withstands even the most severe shop environments and features a hard, anodized gold aluminum finish for added durability. Its convenient anti-tip design allows you to put down the scoop coater without spillage, saving you emulsion and limiting cleanup time. Losing or breaking a plastic end cap during cleanup is no longer a concern with permanent, recessed end caps that are drilled, tapped, and screwed into position. The recessed end caps catch emulsion overflow and for extended wear, the combination edge guard/dust cover protects against nicks and keeps debris out of the emulsion.

PRO-ANGLE™ SCOOP COATER

The one that started it all over 25 years ago with its perfect angle design, the original Pro-Angle Scoop Coater is still an industry favorite. Ideal for smaller screens without any special application requirements, uniform coverage is achieved with this easy-to-handle emulsion applicator. All-aluminum construction with permanent end caps make for fast and easy cleanup, while the standard rubber edge guard protects the coater from unwanted nicks and scratches.

HOW TO CHOOSE THE RIGHT SCOOP COATER

Determining the proper size scoop coater is relatively simple. The scoop coater should have an outside dimension of 3" larger than your image area. For example, if your image area is 10" you should order a 13" scoop coater. Here's why: The recessed end caps at 1/2" per side (1" total) capture any emulsion overflow, and the coating area should extend 1" per side (2" total) beyond your image area. Always double check to make sure your scoop coater fits within your frame.

Scoop coaters work best when cleaned after each use with a soft cloth and warm water. Keep the cover on when not in use to protect edges from nicks. It also extends emulsion life by keeping debris and light out.

That's all it takes! Now you can order your scoop coater with confidence, knowing you have selected the right size for the job.
